

RISEBAG

Handling and emptying of bags

Designed to simplify the work of both operators and handlers, RISEBAG is an essential tool for everyday use in the transportation and transfer of bags.

RISEBAG has been developed in partnership with the INRS (the French national institute for research and safety).

Prevents occupational illnesses

RISEBAG avoids:

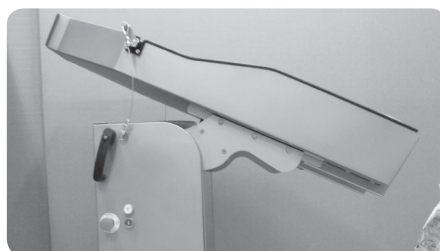

- **Repetitive movements** (musculo-skeletal disorders - MSD)
- **Dust inhalation** (respiratory problems)
- **Manual transportation** of loads (lower back pain)

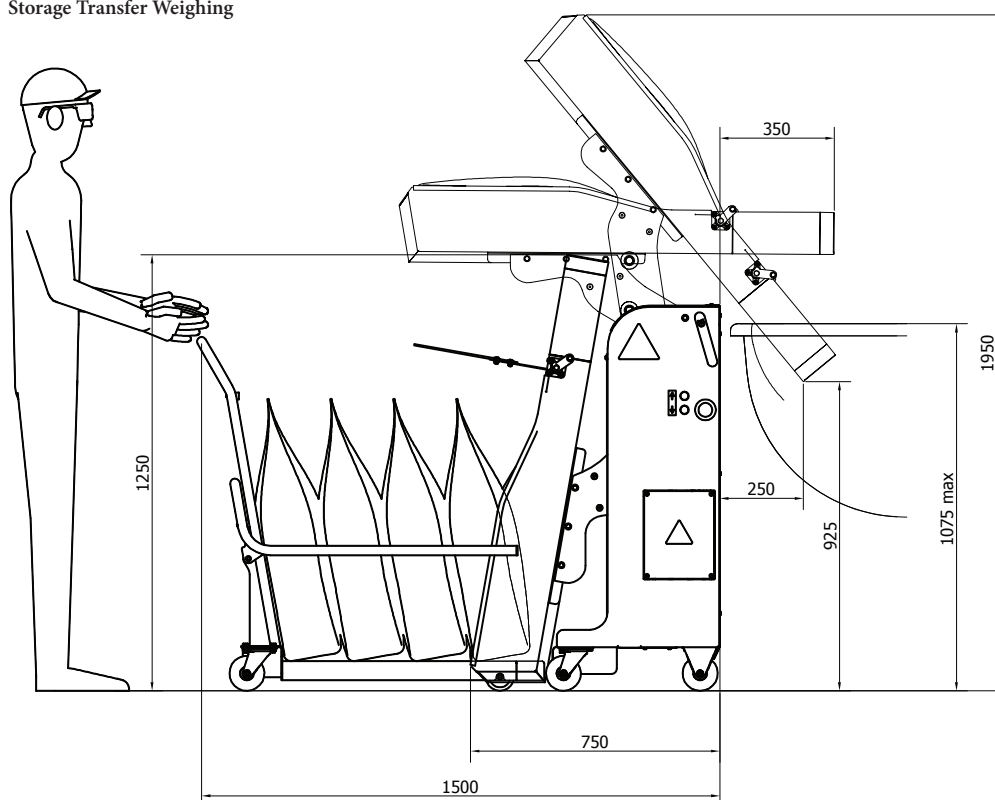

Saves time and effort

- RISEBAG increases productivity: bags are transferred and emptied without having to be carried.

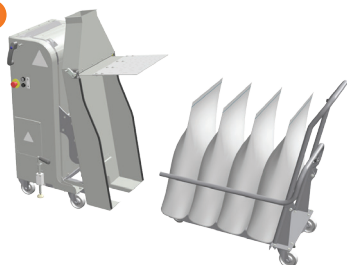

Combines performance with sturdiness

- Compact
- Mobile
- Easy to use
